INTERNSHIP PRESENTATION

Building a Responsive, Interactive Website with HTML, CSS & JavaScript

STUDENT NAME

Saurabh Shivam

ENROLLMENT NO.

CS-2341016

PROGRAM & SEMESTER

B.Tech CSE — Semester 7

ORGANIZATION

ApexPlanet Software Pvt. Ltd.

INTERNSHIP OVERVIEW

Offer ID: APSPL2646249

1

ORGANIZATION

ApexPlanet Software Pvt. Ltd.

2

DOMAIN

Web Development — HTML, CSS & JavaScript

3

DURATION

01 Dec 2025 – 31 Dec 2025 (4 Weeks & 2 Days)

4

MODE

Virtual / Online

5

STRUCTURE

5 progressive tasks across 30 days

About the Organization

ApexPlanet Software Pvt. Ltd. is a software development company dedicated to driving innovation in digital solutions, specializing in web and app development services tailored to client needs.

As part of its commitment to nurturing future tech talent, the company runs a comprehensive Web Development Internship Program — offering hands-on project work, mentorship, and a well-defined task pipeline covering front-end development, API integration, performance, and deployment.

ORGANIZATION SNAPSHOT

Web & App

Development Services

30-Day

Structured Internship

5

Progressive Tasks

100%

Remote / Virtual

Project Objectives

Build a responsive, multi-page static website with semantic HTML5 & CSS3.

Add interactivity using vanilla JavaScript — menus, dark mode, sliders, modals.

Integrate third-party REST APIs to build functional mini-applications.

Optimize the site for performance, SEO, and accessibility.

Organize the codebase with modular CSS/JS and clean naming conventions.

Test across browsers/devices and deploy to a live hosting platform.

Technologies & Tools

1

Core Front-End

- HTML5
- CSS3 (Flexbox/Grid)
- JavaScript (ES6+)

2

Data & APIs

- Fetch API / Async-Await
- OpenWeatherMap API
- JSON / localStorage

3

Workflow & Tools

- VS Code + Live Server
- Git & GitHub
- PageSpeed Insights

4

Deployment

- Netlify
- Vercel
- LinkedIn documentation

TASK

1

Timeline: 6 Days

Build a responsive, multi-page static website using semantic HTML5 and modern CSS layout techniques.

Static Website with HTML & CSS

KEY ACTIVITIES

- Set up VS Code with Live Server & Prettier
- Create GitHub repo with proper structure
- Learn HTML structure, forms, tables, semantics
- Style with Flexbox, Grid, Box Model, media queries
- Build nav bar, hero section, cards, footer
- Build 4 pages: Home, About, Services, Contact
- Add contact form, Google Maps iframe, gallery

DELIVERABLES

- ✓ 4-page responsive website
- ✓ Consistent header/footer
- ✓ Published to GitHub
- ✓ Posted to LinkedIn

TASK

2

Timeline: 7 Days

Add interactive, dynamic features to the website using vanilla JavaScript and DOM events.

JavaScript Interactive Components

KEY ACTIVITIES

- JS fundamentals: variables, functions, DOM, events
- Mobile hamburger menu toggle
- Dark/Light mode toggle saved to localStorage
- “Back to Top” button on scroll
- Auto-play image slider/carousel
- Modal popup + real-time form validation
- Smooth scrolling & animated counters

DELIVERABLES

- ✓ 6+ interactive JS components
- ✓ Integrated into main site
- ✓ Pushed to GitHub
- ✓ Posted to LinkedIn

TASK

3

Timeline: 7 Days

Fetch live data from external APIs and build two fully functional mini-applications.

API Integration & Mini Applications

KEY ACTIVITIES

- Async JS: Fetch API, Promises, async/await
- JSON parsing & error handling
- Weather App using OpenWeatherMap API
- Search city → temp, humidity, wind, icon
- Error handling for invalid city names
- Todo List App: add, edit, delete, filter tasks
- Persist data using browser localStorage

DELIVERABLES

- ✓ Weather App (live data)
- ✓ Todo List App
- ✓ Integrated with main site
- ✓ Posted to LinkedIn

TASK

4

Timeline: 6 Days

Optimize the website for speed, discoverability, accessibility, and long-term maintainability.

Performance, SEO & Code Quality

KEY ACTIVITIES

- Compress & convert images to WebP
- Add lazy loading to images
- Minify CSS & JS, test with PageSpeed Insights
- Add SEO meta tags & Open Graph tags
- Add favicon; improve accessibility (ARIA, alt text)
- Split CSS/JS into modular files (BEM convention)
- Clean comments, remove console logs

DELIVERABLES

- ✓ PageSpeed score: 88/100
- ✓ SEO + accessibility improved
- ✓ Modular, clean codebase
- ✓ Posted to LinkedIn

TASK

5

Timeline: 4 Days

Validate the website across environments, deploy it live, and complete final project submission.

Testing, Deployment & Final Submission

KEY ACTIVITIES

- Cross-browser testing: Chrome, Firefox, Safari, Edge
- Mobile testing via device/Chrome DevTools
- Fix browser-specific bugs
- Write professional README.md
- Deploy live via Netlify / Vercel
- Record 3–5 min demo video, upload to YouTube
- Tag GitHub release v1.0.0 & final submission

DELIVERABLES

- ✓ Live demo URL
- ✓ Clean, tagged GitHub repo (v1.0.0)
- ✓ Demo video on YouTube
- ✓ Final LinkedIn submission post

Outcomes & Certification

The internship resulted in a complete, responsive, and interactive website that combines static page design, dynamic JavaScript functionality, live API data, and performance/SEO best practices — built and deployed following professional web development workflows.

- ✓ Production-ready, deployed website
- ✓ Two functional mini-apps (Weather + Todo)
- ✓ Optimized performance & SEO score
- ✓ Hands-on GitHub & deployment workflow

Thank You
